Explore a Synthesis Design Canvas

InnoPlot Innovation Paradox Thinking Toolkit | v2.3

Think visually. Decide intuitively. Test systematically.

COMPLETED EXAMPLE

A3 LANDSCAPE | DESIGN & TEST

01 SYNTHESIS PROPOSITION

Organise innovation around maximising customer equipment uptime, not around separate product or technology requests.

02 NEW ORGANISING LOGIC

Cross-functional uptime pilot owns outcome

Joint engineering/service decisions

Shared uptime metrics and customer feedback

Explore new service-commercial agreements

03 FIRST EXPERIMENT

Pilot with a small group of willing customers

Combine monitoring, diagnosis and service

Review uptime, response and customer value

04 CAPABILITIES & RESOURCES

AI monitoring and machine data

Engineering, service and product expertise

Customer access; pilot sponsor and authority

05 EXPECTED CUSTOMER & BUSINESS VALUE

Higher machine availability for customers

More trusted, outcome-focused relationships

Potential recurring service revenues

06 KEY RISKS & TRADE-OFFS

Data access and ownership uncertainty

Service capacity and response obligations

Unproven commercial model; protect pilot scope

07 CRITICAL HYPOTHESES & EVIDENCE

BELIEF: customers value measurable uptime

BELIEF: joint teams improve response times

TEST: customer pilot + baseline comparison

EVIDENCE: uptime, response, willingness to pay

08 LEARNING & NEXT DECISION

REVIEW: after first evidence cycle

Learn: performance / design / strategy

DECIDE: adapt design before any scaling

No claim of proven commercial viability
